

Company information for financial analysis and credit risk management

Empowering financial research, benchmarking and
credit analysis

bvdinfo.com

BUREAU VAN DIJK

Company information to empower financial analysis, benchmarking and credit risk management

We have unrivalled coverage of public and private companies with detailed standardised financials, news, M&A history and rumours plus corporate structures.

Assess financial strength and probability of default

Using our products, you can look at a company in detail, create financial performance graphs, get relevant business and M&A news and compare its performance to its peers. We have developed a standardised financial format so you can compare companies across borders.

We work with a number of companies with expertise in credit modelling to provide a dedicated report section on companies' financial strength. It includes various credit indicators, probability of default, propensity to become bankrupt, propensity to be sold and, when valid, an estimated deal value.

Add your own data and create your own ratios

You can add data fields or ratios to our reports. This can include your internal credit limits or ratings. Your data points can be used in your searches, analyses and graphs.

Understand corporate structures to assess wider exposure

We provide details of individuals associated with a company plus the owners and subsidiaries. This data is supplemented and compiled in-house so it's exclusive to our products. It's ideal if you're interested in looking at a company in the context of its group or want to assess the wider risk posed by its associates.

Enrich the data you hold on companies

We can help you integrate the data from our products with your internal systems. You can seamlessly integrate your chosen data points into your own systems to enrich and update the data you hold.

Analyse companies using your internal models

Using our Add-In you can pull data from our products into your own pre-formatted spreadsheets and models. You'll always be using "live" data and you won't have to do manual inputting or re-keying.

Monitor companies with our alerts

Our alerts watch your chosen companies for changes and updates. They're ideal to give you a timely view on how new results, the changing business environment or rumours of M&A activity can affect your risk assessments.

Excel Add-In

Our Excel Add-In means you can populate your Excel credit and scoring models with data from our products. You can create templates that are compatible with your in-house methods. These templates can take advantage of all the sophisticated functionality that Excel offers. By using the Excel Add-In you can reduce the number of applications you use and your templates will be compatible with your workflow. You'll also find it easier to keep your analyses up to date as once you've established a link between Excel and one of our products, your spreadsheet will be refreshed when the report is updated.

Web Services

Web Services are web-based applications that use open, XML-based standards and transport protocols to exchange data with clients. You can have access to the BvD Web Services to customise our applications to suit you and integrate data from our products into your credit scoring systems.

Financial strength

We include information and scores from a number of companies with expertise on companies' financial strength.

Credit analysis framework

Helping automate the credit risk management process and combining internal and external data.
