

BUREAU VAN DIJK

A Moody's Analytics Company

Bureau van Dijk Connector for SAP S/4 HANA

The power and flexibility to gather and analyze
the data you need, for optimized decision making

Description

Bureau van Dijk has the solution for business data analysis in SAP - a direct connector between Orbis and S/4 Hana.

Bureau van Dijk's Connector for SAP S/4 HANA enables you to search for and locate any company within Orbis, and link that entity to a SAP business partner ID (BPID). The Connector is built on the SAP Business Technology Platform, and powered by Orbis, our award-winning company database that contains information on over 425 million global entities – 40 million of which have detailed financials.

The Bureau van Dijk Connector for SAP S/4 HANA can help with:

- **Efficient onboarding:** By finding, linking and updating the SAP business partner records within one process, the Connector allows users to concentrate on analysis of the business partner to make better decisions.
- **Reduction of errors:** SAP business partner records can be enriched at the push of a button, leading to less human error, while allowing confidence in the data source and data inputs.
- **Client-led configuration:** The Bureau van Dijk Connector UI is designed to work out of the box, so you can easily configure settings and field mappings without bringing in specialized SAP consultants.
- **Flexible mapping:** Users can pick the data they believe to be most useful to their organisation and map it to any of their SAP S/4 Hana data fields.

- **Refreshed data:** Jobs can be scheduled to automatically refresh data to ensure data is up to date and relevant.
- **Consistent data:** The Connector delivers a singular view of your SAP business partner record to combine all data attributes, linkages to other companies and risk data in one place.

Highlights

- Any Orbis field can be mapped to its relevant S/4 HANA standard or custom field, eliminating manual data entry errors and your mapped data can be used for analysis in standard or custom SAP data tables.
- For any company, you can choose the master record data source, gather current data as needed, or configure triggers for automatic or manual updates.
- Users can run a one-click risk assessment using Compliance Catalyst capabilities for any entity in the Orbis database.
- With due diligence fueled by Bureau van Dijk, and analysis fueled by S/4 HANA, you can onboard a new SAP business partner, stay apprised of what's happening with your suppliers, and get accurate assessments of your customers.
