

*Company information that  
helps you manage risk*

BUREAU VAN DIJK

# Comprehensive coverage of private companies across the globe

We have information on 120 million companies, with a focus on private companies. We blend information, from over 100 different sources, transpose it into our standard financial template so it's internationally comparable, and append it with our own bespoke research. The result is a unique combination of comprehensive information – financial and non-financial – that's ideal for comparing companies internationally and assessing risk.

## A unique blend of information

### Robust financial data

Our financial template was designed for international benchmarking and comparisons and it's ideal to help you create financial scores.

### Corporate ownership structures

We show you how companies are linked. Using our products you can see the financial viability of the group, or parent, as well as the company you're assessing.

### Financial strength metrics and scores

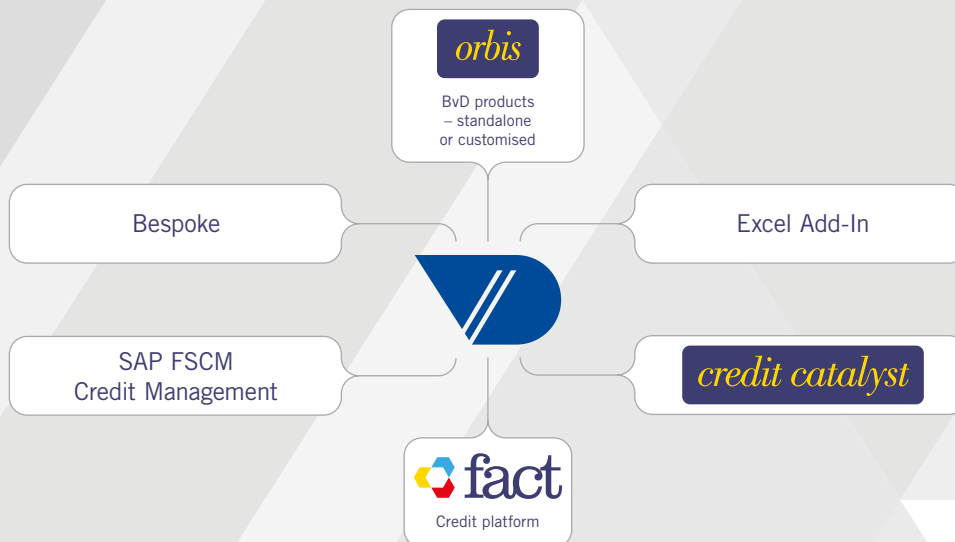

Six specialist firms have created financial models that are optimised to work with our financial template. They give you transparent, independent views, and predictive indicators, on a company's financial strength.

# A range of data tools and platforms

We offer a variety of ways to use our data for credit risk analysis so there's one to suit your environment. Whether you prefer to work in Excel, have SAP systems in place or are looking for a new platform that optimises how you can analyse data there's an option for you that helps you get the best from our information.

## A wide range of options to analyse companies, assess credit worthiness and include in your workflow

### Standalone databases

Our Orbis database includes a range of analysis and custom options including the ability to create your own ratios and include your own line items.

### Excel Add-In

Automatically pull fresh company data into your existing templates for instant analysis of 'live' BvD data with no data entry.

### In your own systems

Enrich and refresh your own data via Web Services for a bespoke solution. We offer support to help you optimise your environment.

### A range of 'plug-ins' and platforms

We offer 'off the shelf' options as well as fully configurable platforms plus plug-ins to major systems such as SAP:

- **Credit Catalyst** – get a customised 'dashboard view' of your portfolio, identify your key risk areas, look at individual companies in detail and set credit limits
- **FACT** – manage your credit exposure and risk management processes via our fully configurable platform, FACT. With FACT you can combine any data (internal or external) with any model(s)
- **SAP FSCM** – pull a range of our data points including financials, ratios etc into your SAP solution to give you richer data for risk classification and credit limit calculations
