BUREAU VAN DIJK

# *Company information to empower financial analysis, benchmarking and credit risk management*

**We have unrivalled coverage of public and private companies with detailed standardised financials, news, M&A history and rumours plus corporate structures.**

## **Assess financial strength and probability of default**

Using our products, you can look at a company in detail, create graphs showing financial performance and get relevant business and M&A news. We've developed a standardised financial format, so it's simple to compare companies against each other - even across borders.

We work with a number of companies with expertise in credit modelling to provide a dedicated report section on companies' financial strength. It includes various credit indicators, probability of default, propensity to become bankrupt, propensity to be sold and, when valid, an estimated deal value.

## **Add your own data and create your own ratios**

You can add data fields or ratios to our reports. This can include your internal credit limits or ratings. Your data points can be used in your searches, analyses and graphs.

## **Understand corporate structures to assess wider exposure**

We provide details of individuals associated with a company plus the owners and subsidiaries. This data is supplemented and compiled in-house so it's exclusive to our products. It's ideal if you're interested in looking at a company in the context of its group or want to assess the wider risk posed by its associates.

## **Enrich the data you hold on companies**

We can help you integrate the data from our products with your internal systems. You can seamlessly integrate your chosen data points into your own systems to enrich and update the data you hold.

## **Analyse companies using your internal models**

Using our Add-In you can pull data from our products into your own pre-formatted spreadsheets and models. You'll always be using "live" data and you won't have to do manual inputting or re-keying.

## **Monitor companies with our alerts**

Our alerts watch your chosen companies for changes and updates. They're ideal to give you a timely view on how new results, the changing business environment or rumours of M&A activity can affect your risk assessments.

## **Tools tailored for the credit environment**

We offer a number of ways to take advantage of our company data. You can use our databases "off the shelf" and take advantage of the various customisation options to create your own ratios and bring in your own data points. We also offer customisation via our Add-In for Excel.

We also have a specific tool for credit professionals - Credit Catalyst. This has been created to help you use the data on our products in the credit environment and offers a variety of options to help you analyse and monitor your portfolios including one page credit reports and score cards, your tailored credit dashboard, portfolio segmentation analysis and alerts.

# A range of products for credit management

## Company databases

*orbis*

Global

Orbis Europe, Orbis Asia-Pacific and Orbis Americas are available as separate modules.

*fame*

UK & Ireland

## Financial strength

We include information and scores from a number of companies with expertise on companies' financial strength.

## Customising our products

### Excel Add-In

Our Excel Add-In means you can populate your Excel credit and scoring models with data from our products. You can create templates that are compatible with your in-house methods. These templates can take advantage of all the sophisticated functionality that Excel offers. By using the Excel Add-In you can reduce the number of applications you use and your templates will be compatible with your workflow. You'll also find it easier to keep your analyses up to date as your spreadsheet will be refreshed when the report is updated.

### Web Services

Web Services are web-based applications that use open, XML-based standards and transport protocols to exchange data with clients. You can have access to the BvD Web Services so you can integrate data from our products into your credit scoring systems. We can help you develop a tailored solution

## *credit catalyst*

This new addition to our Catalyst range has been created to help you optimise the information on our products in a credit environment. Credit Catalyst offers a dashboard summarising your portfolio's current status, options to score individual companies, analyse your portfolio and create reports. Using Credit Catalyst you can create a tailored environment for your end users.

Our ultimate credit platform, FACT is a framework where you can create your own credit environment and workflow. Built entirely to your specifications, a FACT solution can include any data or model.
